## Contents

<b>Chapter One</b>	<b>Structural Engineering and Analysis . . . . .</b>	<b>13</b>
	1. The Scope of Structural Analysis . . . . .	13
	2. Methods of Analysis and Design . . . . .	13
	3. Loads . . . . .	17
	4. Structural Models . . . . .	18
	5. Stable, Unstable, and Instantaneously Unstable Systems . . . . .	20
	6. Statically Determinate and Statically Indeterminate Systems . . . . .	22
	7. Principle of Superposition . . . . .	24
<b>Chapter Two</b>	<b>Formation and Properties of Plane Systems . . . . .</b>	<b>27</b>
	8. Degrees of Freedom and Instability of a System . . . . .	27
	9. Constraints and Simple Systems . . . . .	28
	10. Connection of Systems to the Ground . . . . .	31
	11. Necessary, Redundant, and Partial Constraints . . . . .	32
	12. Constraint Reactions . . . . .	33
	13. Constraint Reactions in Quasi Instantaneously Unstable Systems . . . . .	36
	14. Quantitative Relations between Rigid Bodies and Constraints . . . . .	36
	15. Kinematic Analysis of Systems . . . . .	39
	16. Classification of Plane Systems . . . . .	42
	17. Composite Systems . . . . .	44
<b>ANALYSIS OF STATICALLY DETERMINATE SYSTEMS</b>		
<b>Chapter Three</b>	<b>Basic Methods of Analysis of Plane Statically Determinate Stable Systems Subjected to Fixed Loads . . . . .</b>	<b>46</b>
	18. General . . . . .	46
	19. Constraint Reactions—Determination by the Static Method . . . . .	46
	20. Method of Equivalent Constraints . . . . .	51
	21. Constraint Reactions—Determination by the Kinematic Method . . . . .	53
	22. Bending Moments, Axial Forces, and Shearing Forces . . . . .	59

<b>Chapter Four</b>	<b>Criteria of Instability for Plane Systems with a Sufficient Number of Constraints . . . . .</b>	61
23.	Statical Criteria . . . . .	61
24.	Criterion of Instability in the Method of Equivalent Constraints . . . . .	64
25.	Kinematic Criteria . . . . .	66
<b>Chapter Five</b>	<b>Basic Methods of Analysis of Plane Statically Determinate Systems Subjected to a Moving Load . . . . .</b>	69
26.	Moving Load . . . . .	69
27.	Locating the Design Position of a Moving Load . . . . .	71
28.	Shape of Influence Lines . . . . .	75
29.	Influence Lines—Determination by the Static Method . . . . .	77
30.	Influence Lines—Determination by the Equivalent Constraint Method . . . . .	79
31.	Influence Lines—Determination by the Kinematic Method . . . . .	80
32.	Influence Lines in Systems with Load Transfer through Joints . . . . .	85
33.	Influence Functions and Their First Partial Derivatives . . . . .	87
34.	Use of Influence Lines in Determining Reactions and Deformations . . . . .	88
35.	Property of Linear Portions of Influence Lines . . . . .	89
36.	Variations in $S$ due to a Specific Moving Load, Plotted on the Basis of the Influence Line for $S$ . Influence Line Determined from an Experimental Plot of $S$ . . . . .	89
37.	Design Position of a Moving Load—Determination from Continuous Influence Lines . . . . .	94
38.	Design Position of a Moving Load—Determination from Discontinuous Influence Lines . . . . .	102
39.	Design Position of a Uniformly Distributed Moving Load—Determination from Any Positive or Negative Influence Lines . . . . .	103
40.	Equivalent Load . . . . .	104
41.	Influence Matrices . . . . .	106
<b>Chapter Six</b>	<b>Analysis of Statically Determinate Beams and Plane Frames . . . . .</b>	108
42.	Types of Beams . . . . .	108
43.	Influence Lines for Support Reactions, Bending Moments, and Shearing Forces in Simply Supported Beams with and without Overhangs—Determination by the Static Method . . . . .	109
44.	Influence Lines for Support Reactions, Bending Moments, and Shearing Forces in Simply Supported Beams with and without Overhangs—Determination by the Kinematic Method . . . . .	111
45.	Envelopes for Bending Moments and Shearing Forces Induced by a Moving Load in a Simply Supported Beam . . . . .	113
46.	Envelopes for Bending Moments and Shearing Forces Induced by a Moving Load in a Simply Supported Beam with Two Overhangs . . . . .	122
47.	Bending Moment and Shearing Force Diagrams for Hinged Beams . . . . .	123
48.	Influence Lines for Support Reactions, Bending Moments, and Shearing Forces in Hinged Beams—Determination by the Static Method . . . . .	124
49.	Influence Lines for Support Reactions, Bending Moments, and Shearing Forces in Hinged Beams—Determination by the Kinematic Method . . . . .	126
50.	Analysis of Frames . . . . .	127
51.	Influence Matrix for Bending Moments . . . . .	128

<b>Chapter Seven</b>	<b>Analysis of Statically Determinate Plane Pin-Jointed Trusses . . . . .</b>	129
52.	Types of Trusses . . . . .	129
53.	Axial Forces in Truss Members Due to a Fixed Load—Determination by the Static Method . . . . .	130
54.	Two Axioms of the Method of Joints . . . . .	135
55.	Axial Forces Induced by a Fixed Load in Trusses with Complex Members—Determination by the Static Method . . . . .	136
56.	Axial Forces Due to a Fixed Load—Determination by the Method of Equivalent Constraints . . . . .	138
57.	Axial Forces Induced by a Vertical Load in Some Simple Trusses . . . . .	140
58.	Influence Lines for Support Reactions and Axial Forces in Simple Trusses—Determination by the Static Method . . . . .	144
59.	Influence Lines for Support Reactions and Axial Forces—Determination by the Equivalent Constraint Method . . . . .	150
60.	Influence Lines for Support Reactions and Axial Forces—Determination by the Kinematic Method . . . . .	151
61.	Trusses with Subdivided Panels . . . . .	155
62.	Influence Lines in Trusses with Subdivided Panels—Determination by the Static Method . . . . .	157
63.	Influence Lines for Support Reactions and Axial Forces in Thrust-Developing End-Supported Trusses . . . . .	166
<b>Chapter Eight</b>	<b>Analysis of Three-Hinged Systems . . . . .</b>	163
64.	Types of Three-Hinged Systems . . . . .	168
65.	Three-Hinged Systems under a Fixed Load—Analytical Analysis by the Static Method . . . . .	169
66.	Three-Hinged Systems under a Fixed Load—Graphical Analysis by the Static Method . . . . .	172
67.	Polygon and Line of Pressure in an Arch . . . . .	175
68.	Optimal Configuration of the Centre Line of a Three-Hinged Arch . . . . .	176
69.	Optimal Centre Line of a Three-Hinged Arch Subjected to a Vertical Load Independent of the Arch Configuration . . . . .	177
70.	Optimal Centre Line of a Three-Hinged Arch Subjected to a Vertical Load Dependent on the Arch Configuration . . . . .	178
71.	Optimal Configuration of the Centre Line of a Three-Hinged Arch—Determination by Successive Approximation . . . . .	181
72.	Optimal Centre Line of a Three-Hinged Arch Subjected to a Radial Distributed Load . . . . .	182
73.	Influence Lines for Support Reactions in a Three-Hinged Arch—Determination by the Static Method . . . . .	183
74.	Influence Lines for Bending Moments and Axial and Shearing Forces—Determination by the Static Method . . . . .	184
75.	Influence Lines for Bending Moments and Axial and Shearing Forces—Determination by the Kinematic Method . . . . .	184
76.	Influence Lines for Edge Stresses and Kern Moments . . . . .	189
77.	Influence Lines for Axial Forces in Arched Trusses—Determination by the Static Method . . . . .	191
78.	Influence Lines for Axial Forces in Arched Trusses—Determination by the Kinematic Method . . . . .	194
79.	Influence Lines for Support Reactions and Internal Forces in Arches and Arched Trusses with Overhangs . . . . .	196

80.	Influence Lines for Support Reactions and Internal Forces in Inverted Arches and Suspension Systems . . . . .	197
81.	Analysis of Cable-Stayed Trusses . . . . .	198
<b>Chapter Nine</b>	<b>Analysis of Plane Statically Determinate Combined Systems . . . . .</b>	<b>202</b>
82.	Combined Systems Defined . . . . .	202
83.	Influence Lines for Support Reactions and Internal Forces in Suspension Combined Systems . . . . .	203
84.	Influence Lines for Support Reactions and Internal Forces in Arched Combined Systems . . . . .	207
<b>Chapter Ten</b>	<b>Ultimate Loads in Plane Statically Determinate Structures . . . . .</b>	<b>209</b>
85.	Ultimate Internal Forces . . . . .	209
86.	Equations for Ultimate Internal Forces . . . . .	210
87.	Limit States in Terms of Load-Carrying Capacity . . . . .	215
88.	Ultimate Loads for Beams . . . . .	216
89.	Ultimate Loads for Frames and Arches . . . . .	219
90.	Ultimate Loads for Trusses . . . . .	221
91.	Permanent Set and Residual Stress in Structures Made of Plastic Materials . . . . .	221
92.	Ultimate Loads in the Case of Cyclic Loading . . . . .	225
<b>Chapter Eleven</b>	<b>Deflections in Plane Bar-Type (Framed) Systems . . . . .</b>	<b>226</b>
93.	General . . . . .	226
94.	External and Internal Work . . . . .	227
95.	Work Expressed in Terms of Generalised Forces and Displacements . . . . .	228
96.	External and Internal Actual Work . . . . .	229
97.	External and Internal Virtual Work . . . . .	234
98.	Principle of Virtual Work as Applied to Elastic Systems . . . . .	236
99.	General Expression for Virtual Work . . . . .	237
100.	Reciprocity Theorems . . . . .	238
101.	Flexibility Matrix and Rigidity Matrix . . . . .	241
102.	General Expression for Deflections . . . . .	244
103.	Evaluation of Integrals in the Deflection Formula when One of the Integrand is a Linear Function . . . . .	250
104.	Approximate Evaluation of Integrals in the Deflection Formula . . . . .	253
105.	Deflection Formula in Matrix Form . . . . .	254
106.	Deflections Determined in Terms of Strain Energy . . . . .	259
107.	Symmetric Systems . . . . .	261
108.	Influence Lines for Deflections . . . . .	262
109.	Nodal Deflection Curve Plotted as a Diagram of Bending Moments Induced by a Fictitious Load . . . . .	263
110.	Elastic Load Matrix . . . . .	270
111.	Deflections Determined at the Elasto-Plastic Stage . . . . .	277

<b>Chapter Twelve</b>	<b>Formation and Analysis of Space Systems . . . . .</b>	279
112.	Constraints, Joints, and Attachment to the Ground . . . . .	279
113.	The Number of Constituent Bodies and Constraints in Space Systems . . . . .	283
114.	Space Trusses . . . . .	284
115.	Support Reactions . . . . .	285
116.	Constraint Reactions under a Fixed Load . . . . .	286
117.	Space Trusses—Analysis by Decomposition into Plane Components . . . . .	288
118.	Instantaneous Instability of Space Systems . . . . .	288
119.	Deflections in Space Systems . . . . .	289
<b>ANALYSIS OF STATICALLY INDETERMINATE SYSTEMS</b>		
<b>Chapter Thirteen</b>	<b>Statically Indeterminate Systems. Basic Methods of Analysis . . . . .</b>	290
120.	Statically Indeterminate Systems Defined . . . . .	290
121.	Basic Methods of Analysis . . . . .	292
<b>Chapter Fourteen</b>	<b>The Force Method—a General Theory and Application to Analysis of Plane Statically Indeterminate Frames . . . . .</b>	297
122.	Degree of Static Indeterminacy . . . . .	297
123.	Canonical Equations in Fixed-Load Analysis . . . . .	299
124.	Internal Forces and Their Diagrams in Statically Indeterminate Systems . . . . .	301
125.	The Primary System of the Force Method . . . . .	306
126.	Shearing Force and Axial Force Diagrams . . . . .	307
127.	Canonical Equations in Analysis for Temperature Changes and Support Displacement . . . . .	308
128.	Deflections in Statically Indeterminate Structures . . . . .	310
129.	Checks . . . . .	312
130.	Some Simplifying Assumptions for the Force Method . . . . .	314
131.	Initial Moments of Inertia and Cross-Sectional Areas . . . . .	323
132.	The Least Work Principle . . . . .	324
133.	Canonical Equations Derived from Betti's Law . . . . .	326
134.	Special Methods of Solving Canonical Equations . . . . .	326
135.	Orthogonal Diagrams . . . . .	338
136.	Group Unknowns and Diagrams . . . . .	340
137.	Simplifying Assumptions in the Analysis of Symmetric Systems . . . . .	343
138.	Influence Lines—Determination by the Static Method . . . . .	347
139.	Influence Lines—Determination by the Kinematic Method . . . . .	350
140.	Analysis of Complex Frames . . . . .	352
141.	Analysis of Frames Subjected to Several Types of Live Load . . . . .	353
142.	Conclusion . . . . .	354
<b>Chapter Fifteen</b>	<b>Continuous Beams— Analysis by the Force Method . . . . .</b>	356
143.	General . . . . .	356
144.	Primary System . . . . .	357
145.	Three-Moment Equation . . . . .	357

146.	Practical Hints for the Use of Three-Moment Equation . . . . .	359
147.	Determining Bending Moments and Shearing Forces in a Continuous Beam . . . . .	362
148.	Fixed Point Method . . . . .	363
149.	Continuous Beams on Elastic Supports . . . . .	368
150.	Design Bending Moment Envelopes . . . . .	370
151.	Influence Lines for Support Moments—Determination by the Static Method . . . . .	371
152.	Use of Symmetry in the Static Method of Determining Influence Lines for Support Moments . . . . .	378
153.	Influence Lines for Support Moments—Determination by the Kinematic Method . . . . .	382
154.	Influence Lines for $M$ and $Q$ Induced in the Span . . . . .	384
155.	Influence Lines for Support Reactions . . . . .	385
156.	Analysis of Continuous Beams Varying in Cross Section . . . . .	386
157.	The Shape of $M$ , $Q$ , and $R$ Influence Lines and Design Positions of a Uniformly Distributed Load . . . . .	399

**Chapter  
Sixteen**

	Plane Statically Indeterminate Pin-Jointed Trusses and Combined Systems—Analysis by the Force Method . . . . .	401
158.	Degree of Static Indeterminacy and Primary System . . . . .	401
159.	Canonical Equations . . . . .	401
160.	Axial Forces and Stresses—Effect of Cross-Sectional Area of a Redundant Member . . . . .	403
161.	A Truss of Uniform Strength . . . . .	404
162.	Statically Indeterminate Trusses—Two Forms of Analysis . . . . .	405
163.	Stress Method . . . . .	407
164.	Possible Values of the Main Unknown in a Once Statically Indeterminate Truss . . . . .	408
165.	Theoretical Volume of a Truss . . . . .	410
166.	Stresses due to Temperature Changes, Support Displacement, and Poor Choice of Bar Lengths . . . . .	412
167.	Influence Lines for Axial Forces . . . . .	412
168.	Combined Systems—Approximate Analysis . . . . .	413

**Chapter  
Seventeen**

	Statically Indeterminate Arches—Analysis by the Force Method . . . . .	416
169.	Arch Classification and Shapes . . . . .	416
170.	Practical Hints for Arch Analysis . . . . .	417
171.	Primary Systems for Fixed Arches . . . . .	418
172.	Analysis of Fixed Arches under a Stationary Load . . . . .	419
173.	Fixed Arches—Effect of Temperature Changes . . . . .	423
174.	Fixed Arches—Effect of Support Displacement . . . . .	425
175.	A Fixed Arch with a Centre Line Following the Pressure Curve of a Three-Hinged Arch . . . . .	426
176.	A Moment-Free Fixed Arch . . . . .	427
177.	Stress Adjustment in Fixed Arches . . . . .	427
178.	Analysis of Fixed Arches on Elastic Supports . . . . .	429
179.	Fixed Arches—Influence Lines for Redundants, Bending Moments, and Axial and Shearing Forces . . . . .	432
180.	Influence Lines for Redundant Unknowns—Determination by the Semi-Graphical Method . . . . .	436

181. Parabolic and Catenoid Fixed Arches—Influence Lines for Redundant Unknowns . . . . .	438
182. Analysis of Bridge Arches Combined with a Deck . . . . .	443
183. Analysis of Two-Hinged Arches under a Fixed Load . . . . .	445
184. Two-Hinged Arches—Effect of Temperature Changes and Support Displacement . . . . .	446
185. Two-Hinged Arches—Influence Lines for the Thrust, Bending Moments, and Axial and Shearing Forces . . . . .	447
186. Thrust Influence Line—Determination by the Semi-Graphical Method . . . . .	449
187. Analysis of a Two-Hinged Arch with a Centre Line Following the Pressure Curve of a Three-Hinged Arch . . . . .	450
188. Analysis of Circular Rings . . . . .	451

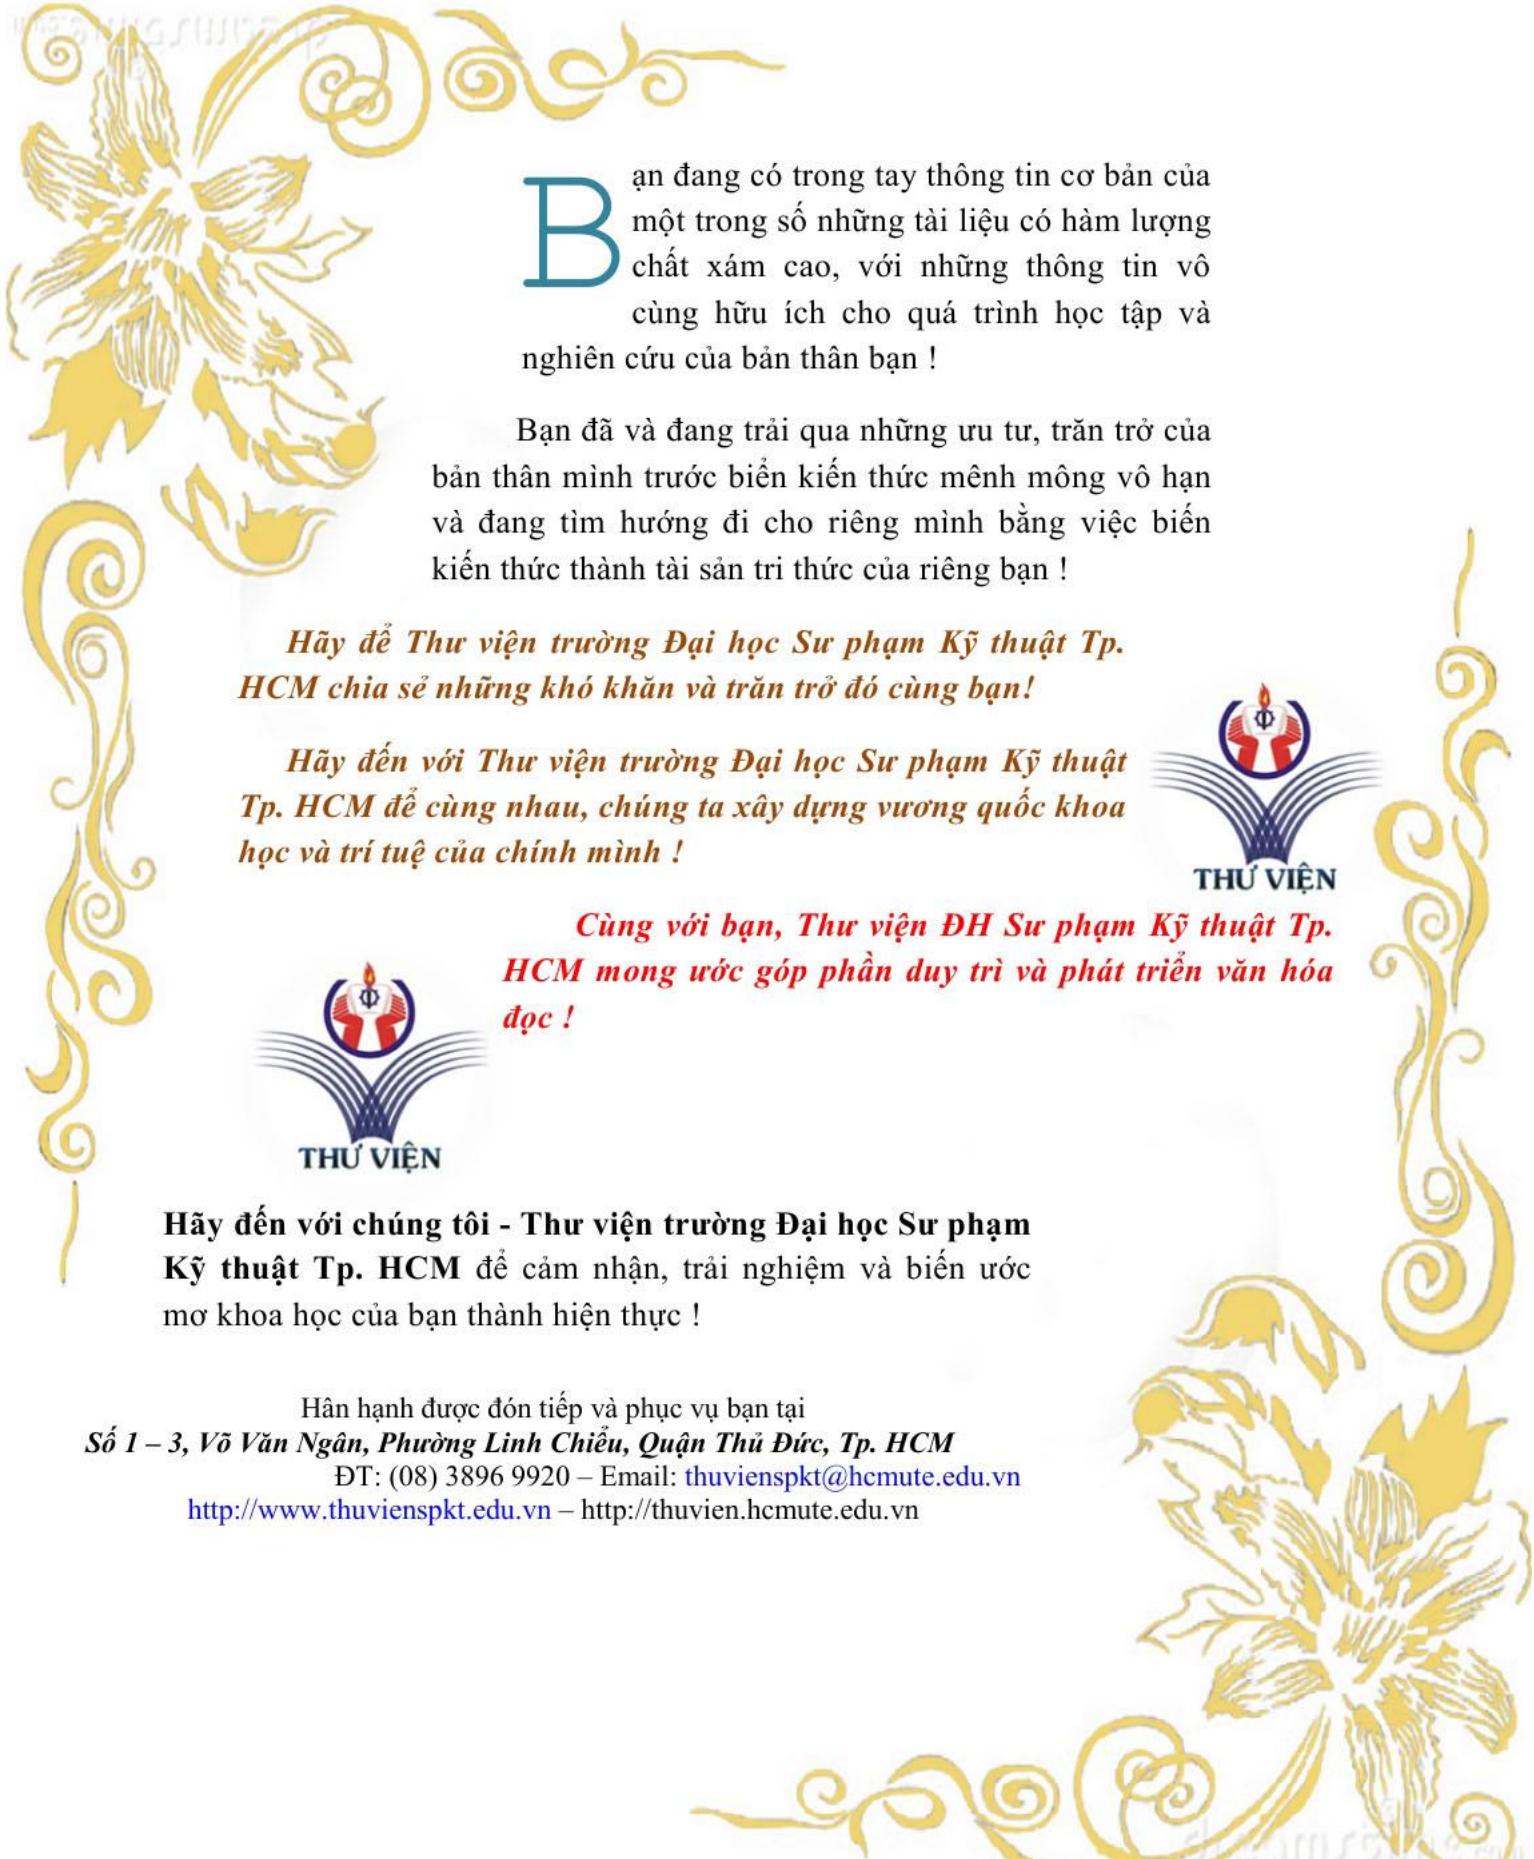

<b>Chapter Eighteen</b> <b>Plane Statically Indeterminate Systems—Analysis by the Displacement Method . . . . .</b>	<b>454</b>
---	------------

189. Degree of Kinematic Indeterminacy . . . . .	454
190. Analysis under a Fixed Load—Canonical Equations . . . . .	456
191. Bending Moment Diagrams for the Members of a Primary System with a Complete Number of Constraints . . . . .	457
192. Relative Displacements of Bar Ends Due to Translations of Joints . . . . .	458
193. Coefficients and Free Terms of the Canonical Equations . . . . .	461
194. Coefficients and Free Terms of the Canonical Equations—Determination by the Static Method . . . . .	464
195. Practical Hints for Determining the Coefficients and Free Terms of the Canonical Equations . . . . .	467
196. Bending Moment Diagram Due to Load—Determination and Checks . . . . .	469
197. Effect of Haunches . . . . .	471
198. Analysis of Frames Restrained from Linear Deflections and Subjected to a Load Applied at the Joints . . . . .	473
199. Use of Symmetry in System Analysis . . . . .	473
200. Influence Lines—Determination by the Static Method . . . . .	474
201. Influence Lines for Joint Displacements—Determination by the Kinematic Method . . . . .	482
202. Effect of Temperature Changes and Support Displacement . . . . .	483
203. Canonical Equations—Static Interpretation of Solution by Successive Approximation . . . . .	489
204. Simplifying Assumptions for the Displacement Method . . . . .	490
205. The Finite-Element Method . . . . .	491

<b>Chapter Nineteen</b> <b>Plane Statically Indeterminate Systems—Analysis by the Mixed and Combined Methods . . . . .</b>	<b>496</b>
--	------------

206. Comparison of the Force and Displacement Methods. Choice of the Analysis Approach . . . . .	496
207. The Mixed Method . . . . .	498
208. The Combined Method . . . . .	500
209. The Combined Method as Applied to Symmetric Systems . . . . .	501

<b>Chapter Twenty</b>	<b>Plane Statically Indeterminate Systems—Analysis by Approximate and Physical Model Methods . . . . .</b>	503
210.	An Outline of Approximate Methods . . . . .	503
211.	Approximate Analysis of Frames Subjected to a Vertical Load . . . . .	504
212.	Approximate Analysis of Frames Subjected to a Horizontal Load . . . . .	506
213.	Physical Model Analysis . . . . .	507
214.	Physical Modelling . . . . .	511
<b>Chapter Twenty One</b>	<b>Ultimate Loads for Plane Statically Indeterminate Systems . . . . .</b>	516
215.	Limit States in Terms of Load-Carrying Capacity . . . . .	516
216.	Analysis of Single-Span Beams Constant in Cross-Sectional Area . . . . .	516
217.	Analysis of Single-Span Beams Varying in Cross Section . . . . .	519
218.	Analysis of Continuous Beams Constant in Cross-Sectional Area . . . . .	520
219.	Analysis of Continuous Beams Varying in Cross Section . . . . .	525
220.	Analysis of Frames and Arches . . . . .	525
221.	Analysis of Trusses . . . . .	538
222.	Removal of Load, Residual Stress, and Permanent Set . . . . .	539
223.	Effect of Support Elasticity and Displacement on Ultimate Load . . . . .	545
224.	Analysis under Repeated Loading . . . . .	546
<b>Chapter Twenty Two</b>	<b>Analysis of Space Statically Indeterminate Systems . . . . .</b>	548
225.	General . . . . .	548
226.	Analysis by the Force Method . . . . .	548
227.	Plane Frames Subjected to a Spatial Load—Analysis by the Force Method . . . . .	551
228.	Analysis of Space Frames by the Displacement Method . . . . .	554
<b>Chapter Twenty Three</b>	<b>Analysis of Plane Systems in the Deformed State . . . . .</b>	557
229.	Characteristic Features of Deformed-State Analysis . . . . .	557
230.	Exact Deformed-State Analysis . . . . .	558
231.	Analysis of Continuous Beams . . . . .	561
232.	Deformed-State Analysis by Successive Approximation (the Iteration Method) . . . . .	568
233.	Frames—Deformed-State Analysis by Successive Approximation . . . . .	571
234.	System Stability . . . . .	571
	<b>References . . . . .</b>	572
	<b>Index . . . . .</b>	573

**B**ạn đang có trong tay thông tin cơ bản của một trong số những tài liệu có hàm lượng chất xám cao, với những thông tin vô cùng hữu ích cho quá trình học tập và nghiên cứu của bản thân bạn !

Bạn đã và đang trải qua những ưu tư, trăn trở của bản thân mình trước biến kiến thức mênh mông vô hạn và đang tìm hướng đi cho riêng mình bằng việc biến kiến thức thành tài sản tri thức của riêng bạn !

*Hãy đến Thư viện trường Đại học Sư phạm Kỹ thuật Tp. HCM chia sẻ những khó khăn và trăn trở đó cùng bạn!*

*Hãy đến với Thư viện trường Đại học Sư phạm Kỹ thuật Tp. HCM để cùng nhau, chúng ta xây dựng vương quốc khoa học và trí tuệ của chính mình !*

*Cùng với bạn, Thư viện ĐH Sư phạm Kỹ thuật Tp. HCM mong ước góp phần duy trì và phát triển văn hóa đọc !*
