Hosting plan: Hosting plan "Freebie"

Although your hosting plan supports global domains you still need to provide initial default domain name which is hosted within our zone. You will be able to add additional domains later in control panel.

Site name (Subdomain): hocdelamgi

Zone name: somee.com

Operating system: Windows Server 2012 (IIS 8.0, ASP, ASP.Net v2.0-4.5, PHP)

ASP.Net version: 4.0, 4.5

Site title: Bài tập ASP.Net

Site description: Quán ăn Cầu Bông

**Information:** Your site will have default domain names as 'Sub domain', 'Zone name' and www.'Sub domain'. 'Zone name'. Also, if supported by hosting plan, you can use your own domain names (registered with domain name registrar). DNS record will be created instantly, but because of DNS replication delay it may take up to 24 hours for your site to be visible to all users on the Internet. You can try to access your site right after it's created. If it's not working retry it every 30 minutes.

The process may take up to several minutes. Please be patient.

**Create website**

- Chọn chức năng Manage website:

**Create website**

You website was created successfully!

**Information:** You can upload content of your web site with either FTP or built in file manager. If you'll use FTP – DO NOT upload files into a root directory. Upload your web content into subdirectory with a name of "www." + SiteName. For your convenience you can also use protected directory (named: "protected." + SiteName) to store files that you don't want to be directly accessible to users ( ex: Database, configuration files..)

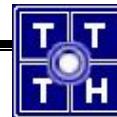

Depending on a location of your web site you may or may not see sub directories of your other web sites in the root directory - this is normal.

**Warning:** Because of DNS replication delay it may take up to 24 hours for your site to be visible to all users on the Internet. You can try to access your site right after it's created. If it's not working retry it every 30 minutes.

- Attach database
- Get data and log files
- Delete database

- Trong minh họa này, tôi sẽ **Attach database**

### Attach MS SQL database

Attach to database: **QuanAnCauBong**

☒ Change default user's schema to 'dbo'

#### Attach existing files

From backup location: QuanAnCauBong.backup.somee.com (Backup) ▼

Select data file (\*.mdf):

Directory structure	Files in \

Select log file (\*.ldf):

Directory structure	Files in \

Selected data file:  
Selected log file:

The process may take up to several minutes. Please be patient.

---

**Upload and attach**

MS SQL data file (\*.mdf): C:\Program Files\Microsoft SQL Server\MSSQL.1\MSSQL\Data\BanhKeo.mdf

MS SQL log file (if exists): C:\Program Files\Microsoft SQL Server\MSSQL.1\MSSQL\Data\BanhKeo\_log.ldf

Total size of both files cannot exceed 50MB! If it's more than use a 'Backup file manager' or FTP to upload the database files.

The process may take up to several minutes. Please be patient.

**Chúc các bạn thành công !!!**
